

nicos CYBER DEFENSE ASSESSMENT

**HOW WELL IS YOUR COMPANY PROTECTED AGAINST CYBER ATTACKS?
WE WILL FIND OUT FOR YOU IN 3 PHASES.**

1

First, we conduct an **OSINT analysis** (Open Source Intelligence) analysis of publicly accessible information on the clear and dark web and identify potential vulnerabilities and any discrepancies with your content deliberately published online.

2

We then analyze your company's cyber resilience with regard to the threat posed by current ransomware campaigns based on intensive **expert interviews** and **technical tests**.

3

In our detailed report, you will find out how well your company is protected against cyber attacks. In the concluding **results workshop**, we discuss specific recommendations for action. We answer your questions in a direct dialog and discuss how you can protect your company even better.

The results of the assessment provide you with an overview of your current security level.

Expenditure time **nicos**: ca. 7,5 PD | **Your company's** time expenditure: ca. 1,5 PD

WHAT DOES THAT MEAN IN CONCRETE TERMS?

The term **OSINT** comes from the world of intelligence services: We only use freely available, public sources to obtain information and scan the Internet for you to find out how your company is positioned on the Internet. Our checks include personnel data, company structure, email addresses, passwords, and confidential documents.

In our **assessment**, we use in-depth expert interviews and thorough technical checks to analyze your company's threat situation with regard to specific, current ransomware campaigns. Typically, we check your internal network, organizational processes and guidelines, for example.

We compile our findings for you in a comprehensive **assessment report**, weighted according to severity and implementation effort, and highlight the most urgent need for action along the phases of a potential attack. Of course, we also take the time to go through and discuss our findings in detail with you in a **joint workshop**. We answer your questions, discuss your individual clarification requirements and show you further support options from nicos.

YOUR PARTNER FOR CYBER ATTACK ANALYSIS AND DEFENSE.
